Multitalent for everyday lab tasks

Sigma is a leading international manufacturer of laboratory centrifuges for diverse sectors, including biotechnology, pharmaceutical, medical and environment analysis. Laboratories, institutions and companies everywhere in the world have been relying on premium Sigma quality – Made in Germany – for more than 40 years. The company stands for innovative products and development of durable, energy-efficient and especially user-friendly devices.

The Sigma 2-16 series features high performance, compact size and versatility. These compact universal centrifuges are easy to use, pleasantly quiet, and provide extraordinary capacity with 4 x 100 ml in a swing-out rotor or 4 x 85 ml in a fixed-angle rotor.

The extensive accessories and high RCF of up to 21.913 x g make the Sigma 2-16P and the refrigerated version 2-16KL ideal for a wide variety of applications in medicine, clinical diagnostics, research, industry and biotechnology. The coolable and heatable version Sigma 2-16KHL is used with specimens whose viscosity needs to be lowered during centrifuging, and in molecular biology to improve the viability of cells.

Along with versatility, the Sigma 2-16 series scores top marks for performance. For example, 50 ml culture tubes can be centrifuged at more than 15,000 x g in a fixed-angle rotor, and up to 24 blood tubes (16 x 100 ml) can be centrifuged in a swing-out rotor.

Universal centrifuge with a broad application spectrum

Safe, versatile and intuitive

The Sigma 2-16 series represents a unique combination of performance, versatility and ease of use. With their high RCF, advanced controller and impressive safety features, they excite even demanding users.

Standard routines can be stored and recalled conveniently in up to 50 programs. Ten selectable acceleration and braking curves facilitate optimisation of separation processes and additionally shorten run

times. The refrigerated version Sigma 2-16KL and the coolable and heatable version Sigma 2-16KHL have a high-performance cooling system with precisely settable temperature over the range of -10 °C to +40 °C or -10 °C to +60 °C, respectively. The pre-cooling function "Rapid Temp" allows the centrifuge chamber and accessories to be cooled to a defined temperature. That guarantees optimum safety for work with heat-sensitive specimens.

Rotors and accessories

Large selection of rotors and capacities

The Sigma 2-16 series can be used with fixed-angle and swing-out rotors for PCR, reaction, round-bottom and conical tubes as well as microtiter plates. This extensive portfolio is rounded out with a haematocrit rotor for determination of the volume percentage of erythrocytes in blood.

A total of 17 swing-out and fixed-angle rotors are available, along with a wide range of accessories. The tube capacity extends from 0.2 ml to 85 ml in fixed-angle rotors or 0.2 ml to 100 ml in swing-out rotors. A highlight is the 6 x 50 ml Falcon fixed-angle rotor 12181 with a maximum RCF of up to 15,294 x g – an absolute best

value in this class. Specifically for clinical diagnostics, the innovative 6-place bucket 13296 has been developed to hold virtually all commonly used blood collection tubes. Thanks to the intelligent design, the swing-out rotor allows up to 24 blood collection tubes (16 x 100 mm) per run to be centrifuged at a maximum RCF of up to 3,717 x g.

As a special feature, Sigma can produce custom accessories upon request. The rotors and accessories are made from certified high-grade materials to withstand the most severe stresses.

Cleanroom

Robust and resistant

An extremely resistant cleanroom coating is available from Sigma for all aluminium buckets and rotors. This coating provides reliable corrosion protection for accessories, especially where aggressive chemicals are used. The cleanroom coating can even withstand

exposure to sodium hydroxide and hydrochloric acid. The surfaces are also food-grade (FDA certified) and can easily be cleaned without residues.

Material properties

Guideline for optimal tube selection

Due to the many factors that influence material properties, this overview is only intended as a general recommendation. There is no guarantee of the stated properties. Users should therefore carefully

test materials for suitability under specific application conditions. Tubes should be discarded as soon as they show any sign of material fatigue.

Spincontrol L Controller

Easy to operate, advanced safety features

The Spincontrol L controller combines intuitive operation with a multitude of options in a well-conceived package. It is fundamentally based on a Sigma patent. The brilliantly simple design of the Spincontrol L has only three buttons (Start, Stop, and Lid) along with the proven multifunction knob. Operating parameters can be entered conveniently and stored in up to 50 programs using the intuitive user interface. The backlit LCD display is easy to read at a distance.

A special feature is automatic monitoring of the number of operational rotor cycles. The integrated cycle counter keeps track of all completed rotor runs and informs the user when a defined limit value is reached. This alert system is based on real measurement data and helps to reliably avoid damage to rotors and the centrifuge.

The high-performance cooling system provides precise control over the range of -10 °C to +40 °C with fine adjustment in 1 °C increments. Along with the pre-cooling function, the Sigma 2-16KL and 2-16KHL feature optionally selectable standstill cooling.

Centrifuge tables

Sigma centrifuge tables are available in six different sizes. Matched to the corresponding centrifuge dimensions, they combine convenient work height with an optimally calculated footprint. The tables are made from coated sheet steel and are equipped with a storage compartment (with two doors) and a convenient pull-out shelf. Lockable castors allow the centrifuge tables to be easily moved and positioned in the laboratory.
